Preet Ghanshyam Dave

AI / ML Engineer

Ahmedabad, Gujarat, India · **iampreetdave@gmail.com** · +91 90810 25277 · github.com/iampreetdave-max · linkedin.com/in/preet-dave-452023271 · iampreetdave.me

PROFILE

AI/ML Engineer based in Ahmedabad, India, specializing in applied machine learning, large language models, and agentic AI systems. Final-year B.Tech (CSE, AI & ML) student at NLJIET (GTU) who progressed from machine-learning intern to full-time AI/ML software engineer at a Gujarat startup, delivering ML models in direct collaboration with clients. Builds end-to-end systems spanning classical ML (scikit-learn, XGBoost), deep learning (PyTorch, TensorFlow), computer vision (YOLOv8, CLIP, TrOCR), and LLM/agent stacks (Claude API, Claude Agent SDK, Model Context Protocol, Google Gemini ADK, RAG). Hackathon builder with projects for ISRO, city police, and national competitions, plus an authored research paper and technical blogs. Founder of Tensor Tapri (tensortapri.org), a weekly AI/ML newsletter and community for India.

EXPERIENCE

AI/ML Software Engineer · Agility — Mar 2026 – Present

Gujarat, India · On-site

- Develop machine-learning models in direct collaboration with clients, translating business requirements into model specifications and integrating them into existing software products.
- Lead delivery on applied AI/ML projects, owning problem framing, model selection, and integration to build a strong production foundation in AI and ML.
- Deliver hands-on, real-world industry work at a dynamic Gujarat startup, balancing rapid iteration with reliable client outcomes.
- Ship LLM agent systems, document-AI pipelines and procurement software for clients, end to end.
- Promoted from machine-learning intern to full-time engineer after demonstrating delivery across a 10-month total tenure.

Founder · Tensor Tapri — Nov 2026 – Present

Ahmedabad, India · tensortapri.org

- Started a free weekly email on AI, ML, automation and data for India, beginning in Ahmedabad, with meetups and city chapters to follow.
- Its “What’s brewing” page ranks the week’s top world and India AI stories by outlet coverage, fed by my AI Race News scraper, alongside Epoch AI benchmark charts served from Cloudflare edge functions.

Machine Learning Intern · Agility — Sep 2025 – Mar 2026

Gujarat, India · On-site

- Collaborated on ML projects that enhanced client automation processes, contributing to data preparation, modeling, and integration.
- Engaged directly with clients to understand needs and help deliver tailored ML solutions.
- Assisted in deploying predictive models that improved operational efficiency for client workflows, earning a full-time offer.

Project Lead · Gujarat Technological University (GTU)

Oct 2023 – Nov 2026

Gujarat, India · On-site

- Led development of CodeTransform, a Python ↔ JavaScript code converter, from inception through a state-level Design Engineering presentation.
- Designed the application architecture while concurrently building the product, balancing technical design with hands-on implementation.
- Coordinated cross-functional student teams to align goals, deliverables, and timelines; drove the project from prototype to a demonstrable web app with auto language detection and confidence-scored conversions.

Student Intern, AI/ML · Stealth AI Startup

Jan 2025 – Aug 2025

Remote

- Took ownership of ML models and pipelines, applying reinforcement-learning techniques for the product's core logic.
- Built an MVP end-to-end and pitched it to potential business partners; helped prepare the project for a Y Combinator application.
- Operated with high autonomy in a small remote team, contributing across modeling, pipeline engineering, and product framing.

Team Lead · Smart India Hackathon (SIH)

Aug 2024 – Dec 2024

India · National

- Directed a team building a virtual herbal garden featuring detailed interactive 3D models, presented at the national level.
- Managed team dynamics, task allocation, and coordination for smooth execution under competition deadlines.

PROJECTS

Q, Meeting Agent with Memory · AGENTIC AI

My meeting agent, in two parts. A self-hosted bot joins Google Meet calls, saves the transcript, chat and screen shares into long-term memory, pulls out action items, and flags risky talk for private review; ask it what someone promised last month and it answers with verified citations to the exact meeting lines. A desktop copilot, extended from an open-source Electron app, transcribes on-device with Parakeet, drafts answers to questions as they are asked, and feeds every finished meeting into the same memory.

Python · LiteLLM · SQLite · Attendee · Docker · Electron · Parakeet STT

WinWall, Slack-to-Website Results Pipeline · AUTOMATION

Keeps a live client-results wall on a website up to date with no developer in the loop. Claude scans Slack for client wins and posts them for approval; one emoji from the team approves a win, which is screenshotted with Playwright, has reviewer names blurred, and is uploaded to WordPress into the right filter on the live wall. Loom and Wistia case-study videos are picked up automatically. 355 wins and 390+ images published so far, all on GitHub Actions schedules.

Python · Claude API · Slack API · Playwright · WordPress REST · GitHub Actions

CallBrain, LLM Agents on Client Calls · AGENTIC AI

A team of LLM agents that listens to every client call, built for 60 to 90 calls a day: multilingual call scoring that checks whether the client actually understood, pre-call agendas with a win detector, mid-week follow-up check-ins with a dashboard scoped to each manager’s own clients, churn-risk bands and referral prompts.

Claude API · Python · Slack API · Google Workspace

Marine Procurement ERP · DOCUMENT AI

An AI-native ERP for ship suppliers. RFQs arrive by email or supplier portal and become priced PDF quotations against a master catalogue, then purchase orders. Vendor invoices are extracted by an LLM, checked by a person, and posted into FIFO stock layers that drive client invoicing and payables, with an in-app assistant on top.

Node.js · React · MongoDB · Mistral · Playwright · Jest

LedgerLens, Bank-Document OCR · DOCUMENT AI

Bank statements and scanned cheques to a reconciled ledger. Printed fields come straight from the PDF's text layer, handwriting goes to OCR plus a vision-language model, and deterministic validators check MICR checksums, written-vs-numeric amounts and the closing balance before anything counts as done. Per-bank adapters, an editable grid with Excel export, and an invoice VAT/GL coder share one multi-tenant platform. github.com/iampreetdave-max/ledgerlens-ai-bank-document-ocr

Python · FastAPI · Mistral OCR · Pixtral · PyMuPDF · Supabase

Padosi, P2P Rental Marketplace · FULL-STACK

Rent drills, cameras or party gear from verified people nearby. Locations are fuzzed and grid-snapped so repeated searches cannot triangulate an address, handovers use photo checks and 6-digit codes, and deposits auto-release 48 hours after return. One typed API serves a Next.js site and an Expo mobile app.

Next.js · Expo · Hono · Postgres · Drizzle · TypeScript

Real-Time Poker Platform · REALTIME SYSTEMS

A play-money poker app for a private card room: Texas Hold'em and pot-limit Omaha, multi-table play and tournaments on iOS, Android and web. The server is the only authority; every chip movement runs inside a row-locked Postgres transaction and every state change broadcasts over Socket.IO, so a reconnect always rebuilds from the database.

Flutter · Next.js · Node.js · Socket.IO · Postgres · Redis

TransitOps, Fleet Operations Platform · FULL-STACK · HACKATHON

Dispatch, maintenance, fuel and expenses for four roles, with every business rule enforced inside Postgres so no client can bypass it. Drivers share GPS from a phone browser and positions stream live to the ops map.

Next.js · Supabase Realtime · Leaflet · Recharts · Vercel

Therma Netra, Digital Twin of India's Climate · CLIMATE ML · DIGITAL TWIN

An AI-powered digital twin of India's climate built entirely on national datasets (IMD, INSAT/MOSDAC, IMDAA, CPCB). One continuously-assimilated twin powers climate state & forecast, urban-heat mitigation, and surface air quality, achieving ~30% forecast skill over a persistence-of-anomaly baseline. Built for ISRO's Bharatiya Antariksh Hackathon (BAH) 2026, Problem Statement #5.

Python · Streamlit · xarray · imdlib · Pydeck · Climate ML · Digital Twin

CityShield · VisionScan, Unified AI Policing Platform · COMPUTER VISION · GOVTECH

A unified AI policing platform fusing physical and cyber crime on one GIS map, forecasting next-week risk, and closing the loop from a live CCTV anomaly to a dispatched patrol unit, fully offline on CPU. Four CCTV search modes (CLIP to FAISS, ArcFace, YOLOv8), 7 generated statutory documents (en/hi/gu), a 4-layer OWASP middleware, and 77 passing backend tests. Risk model backtested on synthetic data (Hit-Rate@10 0.771, PAI@10 2.31x over 8 weekly folds) as a methodology demonstration. Built for KANAD S.H.I.E.L.D. 2026 with the Cyber Crime Branch, Ahmedabad City Police. github.com/iampreetdave-max/Guardian-Angle

FastAPI · React · CLIP · FAISS · YOLOv8 · InsightFace · RAG · Docker

Arbiter, Agentic Legal AI · AGENTIC AI · LEGAL TECH

A full-stack AI legal assistant that turns a problem described in plain English or Hindi into a structured legal document with no upfront lawyer fees. Gemini agents (Google ADK) research applicable law in real time and draft with citations across 6 document types and 5 jurisdictions. Deployed on Google Cloud Run (asia-south1). Built for XPRIZE "Build with Gemini" 2026. github.com/iampreetdave-max/arbiter

Next.js 14 · FastAPI · Google Gemini 2.0 · Google Agent Development Kit · Firebase · Cloud Run · Razorpay

AI Race News, AI/ML News Aggregation Platform · DATA ENGINEERING · BACKEND

A production platform that ingests 110+ AI/ML sources every 15 minutes via APScheduler, deduplicates with a 3-layer pipeline (URL, content hash, title similarity), auto-tags across 12 categories, and serves 5 audience-specific feeds through a public FastAPI REST API and a Next.js frontend. github.com/iampreetdave-max/ai-race-news

FastAPI · Python · BeautifulSoup · APScheduler · Docker · Next.js · SQLite · pytest

NBA Game Predictor · SPORTS ML

A fully automated NBA pipeline that runs daily on GitHub Actions. Pre-game team stats and live sportsbook odds go in; two XGBoost regressors predict home and away points, which become moneyline, over/under and spread picks graded against final scores. Over 1,064 settled games: 66.3% moneyline accuracy, and Grade-A over/under picks returned +16.5% ROI across 95 bets. github.com/iampreetdave-max/basketball-NBA

XGBoost · Sportradar API · PostgreSQL · GitHub Actions

Soccer Match Predictor · SPORTS ML

Scoreline predictions across 10 major leagues, turned into moneyline, over/under 2.5 and both-teams-to-score picks. 21 weighted features feed separate Ridge models for home and away goals, and market-aware grading rewards contrarian picks: +9.1% ROI on A and B grade moneyline picks over 1,473 settled bets. A second-generation Poisson and Elo model, tested walk-forward on 88,061 unseen matches across 38 leagues, matches the closing line's accuracy (57.4% on over/under). github.com/iampreetdave-max/football-predictions

Ridge · Poisson GLM · Elo · FootyStats API · GitHub Actions

NASCAR Race Predictor · SPORTS ML

Calibrated win and top-N probabilities for every driver in a race. Each track type (road course, short track, superspeedway) gets its own ensemble of XGBoost, LightGBM, random forest and gradient boosting, trained on 7,566 historical race records and compared live against odds from 9 sportsbooks. github.com/iampreetdave-max/NASCAR-USA

XGBoost · LightGBM · scikit-learn · Sportradar API

CodeTransform, Python ↔ JavaScript Converter · DEVELOPER TOOLS

A web-based code converter between Python and JavaScript built on 122+ tested conversion rules, with auto language detection and color-coded confidence scoring. Zero-build vanilla-JS + Tailwind frontend on a FastAPI backend. GTU state-level Design Engineering project (Project Lead). github.com/iampreetdave-max/code-convertor

FastAPI · Python · JavaScript · Tailwind CSS · Language Detection

TalkToNotes, Handwriting to Knowledge Base · NLP · DOCUMENT INTELLIGENCE

A hackathon project that digitizes handwritten and printed notes with TrOCR, then turns them into a searchable knowledge base powering a chatbot and one-click quiz generation. Built for the Rotaract Club Hackathon.

TrOCR · Transformers · Vector Search · Python · NLP · OCR

Sky Alerts, Astronomy Email Alerts · FULL-STACK

Subscribe with your location and interests (eclipses, meteor showers, ISS passes, planets, moon phases) and a scheduled Python job emails what is visible in your sky, daily, weekly or for major events only. Includes a no-signup "today's sky" page and one-click unsubscribe.

Next.js · Supabase · Python · GitHub Actions

Find-Ranks, PDF Marksheet Analytics · UTILITY

A Streamlit utility that extracts marks from multiple PDF mark-sheets, computes cumulative performance, and generates rankings with analytics for educational institutions. github.com/iampreetdave-max/Find-Ranks

Streamlit · Python · PDF Processing · pandas

SKILLS

Languages: Python (advanced), C / C++ (advanced), JavaScript, TypeScript, SQL, HTML/CSS, PHP

ML & Deep Learning: scikit-learn, XGBoost, LightGBM, TensorFlow, PyTorch, Keras, pandas, NumPy, feature engineering, ensemble methods, regression & classification

AI / LLM & Agents: LLMs, RAG, Claude API, Claude Agent SDK, Model Context Protocol (MCP), Google Gemini ADK, prompt engineering, vector search & embeddings (FAISS, ChromaDB), Mistral OCR / Pixtral, LiteLLM, on-device speech-to-text, NLP

Computer Vision: YOLOv8, CLIP, TrOCR, InsightFace / ArcFace, OCR

Backend & Full-stack: FastAPI, Next.js, React, Node.js, Express, Hono, Electron, Expo / React Native, Flutter, Socket.IO, REST APIs, Streamlit

Data & Infrastructure: PostgreSQL / Supabase, MongoDB, Redis, SQLite, Cloudflare Pages / D1, Playwright, Docker, Docker Compose, GitHub Actions / CI, Azure, Google Cloud Run, Netlify, Hugging Face

Automation: Make.com, n8n, Zapier, GoHighLevel, webhook & API integrations

Practice: MLOps, model deployment, backtesting & validation, Git

EDUCATION

B.Tech, Computer Science & Engineering (AI & ML)

2022 – 2026 (expected)

NLJIET, Gujarat Technological University (GTU), Ahmedabad, India

- Coursework & focus: Large Language Models (LLMs), Data Structures & Algorithms, AI/ML, Mathematics for ML.
- Coordinator for multiple student-council events, owning end-to-end planning, execution, and marketing.
- Member of the college research group; co-authoring research papers with classmates.

CERTIFICATIONS

Building with the Claude API, Anthropic, 2026 (ID tgbfokqc8ome)

Claude Code in Action, Anthropic, 2026 (ID 2zrdb9syz8hf)

LEADERSHIP & ACHIEVEMENTS

- Founded Tensor Tapri (Nov 2026), a weekly AI/ML newsletter and community for India.
- Promoted from Machine Learning Intern to full-time AI/ML Software Engineer at Agility within a 10-month tenure.
- Project Lead at GTU: drove the CodeTransform converter from inception to a state-level Design Engineering presentation.
- Team Lead, Smart India Hackathon 2024: led a team to the national level with a virtual herbal garden featuring 3D models.
- Built CityShield · VisionScan for KANAD S.H.I.E.L.D. 2026 with the Cyber Crime Branch, Ahmedabad City Police.
- Built Therma Netra for ISRO's Bharatiya Antariksh Hackathon (BAH) 2026 (Problem Statement #5).
- Coordinator for multiple GTU student-council events; member of the college research group.
